

Thank you for downloading Schema!

Schema is a visual scripting tool that allows you to create Behavior Trees for video games with minimal hassle and configuration. Simply install, and get ready to go!

The example project can be found in the Examples folder at the root of this package. It contains a simple behavior tree, a custom node, as well as a scene displaying the capabilities of this package.

This asset is usable both by programmers and non-programmers, and is designed to be as user-friendly as possible. If you find anything related to user experience that you think could be improved, email us at support@schemaunity.com

Required Unity versions

2020.1 and above

Documentation
